

# Multiplication and Division

## Year One/Year Two

|   |   |   |  |
|---|---|---|--|
| <p>One bag holds 5 apples.<br/>How many apples do 4 bags hold?</p> <p><math>5 + 5 + 5 + 5 = 20</math><br/><math>4 \times 5 = 20</math><br/><math>5 \times 4 = 20</math></p> | <p>Children represent multiplication as repeated addition in many different ways.</p> <p>In Year 1, children use concrete and pictorial representations to solve problems. They are not expected to record multiplication formally.</p> <p>In Year 2, children are introduced to the multiplication symbol.</p> | <p>There are 20 apples altogether.<br/>They are shared equally between 5 bags.<br/>How many apples are in each bag?</p> <p><math>20 \div 5 = 4</math></p> | <p>Children solve problems by sharing amounts into equal groups.</p> <p>In Year 1, children use concrete and pictorial representations to solve problems. They are not expected to record division formally.</p> <p>In Year 2, children are introduced to the division symbol.</p> |
|---|---|---|--|

## Year One/Year Two

|  |  |   |  |
|--|--|---|--|
| <p>There are 20 apples altogether.<br/>They are put in bags of 5.<br/>How many bags are there?</p> <p><math>20 \div 5 = 4</math></p> | <p>Children solve problems by grouping and counting the number of groups. Grouping encourages children to count in multiples and links to repeated subtraction on a number line. They can use concrete representations in fixed groups such as number shapes which helps to show the link between multiplication and division.</p> | <p><b>Skill: Divide 2-digits by 1-digit (sharing with no exchange)</b></p> <p><b>Year: 1/2</b></p> <p><math>48 \div 2 = 24</math></p> | <p>When dividing larger numbers, children can use manipulatives that allow them to partition into tens and ones.</p> <p>Straws, Base 10 and place value counters can all be used to share numbers into equal groups.</p> <p>Part-whole models can provide children with a clear written method that matches the concrete representation.</p> |
|--|--|---|--|

## Year Three/Year Four

|                                       |   |                                    |   |
|---------------------------------------|---|------------------------------------|---|
| <p><math>34 \times 5 = 170</math></p> | <p>Teachers may decide to first look at the expanded column method before moving on to the short multiplication method. The place value counters should be used to support the understanding of the method rather than supporting the multiplication, as children should use times table knowledge.</p> | <p><math>52 \div 4 = 13</math></p> | <p>When dividing numbers involving an exchange, children can use Base 10 and place value counters to exchange one ten for ten ones. Children should start with the equipment outside the place value grid before sharing the tens and ones equally between the rows.</p> <p>Flexible partitioning in a part-whole model supports this method.</p> |
|---------------------------------------|---|------------------------------------|---|

## Year Three/Year Four

|  |  |   |  |
|--|--|---|--|
| <p><math>245 \times 4 = 980</math></p> | <p>When moving to 3-digit by 1-digit multiplication, encourage children to move towards the short, formal written method. Base 10 and place value counters continue to support the understanding of the written method. Limit the number of exchanges needed in the questions and move children away from resources when multiplying larger numbers.</p> | <p><math>53 \div 4 = 13 \text{ r}1</math></p> | <p>When dividing numbers with remainders, children can use Base 10 and place value counters to exchange one ten for ten ones. Starting with the equipment outside the place value grid will highlight remainders, as they will be left outside the grid once the equal groups have been made.</p> <p>Flexible partitioning in a part-whole model supports this method.</p> |
|--|--|---|--|

# Year Four

$$844 \div 4 = 122$$

| H       | T     | O   |
|---------|-------|-----|
| 100 100 | 10 10 | 1 1 |
| 100 100 | 10 10 | 1 1 |
| 100 100 | 10 10 | 1 1 |

Children can continue to use place value counters to share 3-digit numbers into equal groups. Children should start with the equipment outside the place value grid before sharing the hundreds, tens and ones equally between the rows. This method can also help to highlight remainders. Flexible partitioning in a part-whole model supports this method.

$$844 \div 4 = 122$$

# Year Four/Year Five

$$52 \div 4 = 13$$

|   |   |   |   |
|---|---|---|---|
|   |   | 1 | 3 |
| 4 | 5 | 1 | 2 |

When using the short division method, children use grouping. Starting with the largest place value, they group by the divisor.

Language is important here. Children should consider 'How many groups of 4 tens can we make?' and 'How many groups of 4 ones can we make?'

Remainders can also be seen as they are left ungrouped.

# Year Five

$$1,826 \times 3 = 5,478$$

|   | Th | H | T | O |
|---|----|---|---|---|
|   | 1  | 8 | 2 | 6 |
| x |    |   |   | 3 |
|   | 5  | 4 | 7 | 8 |
|   | 2  |   | 1 |   |

When multiplying 4-digit numbers, place value counters are the best manipulative to use to support children in their understanding of the formal written method. If children are multiplying larger numbers and struggling with their times tables, encourage the use of multiplication grids so children can focus on the use of the written method.

|   |   |   |   |   |
|---|---|---|---|---|
|   |   | 2 | 1 | 4 |
| 4 | 8 | 5 | 1 | 6 |

$$856 \div 4 = 214$$

Children can continue to use grouping to support their understanding of short division when dividing a 3-digit number by a 1-digit number.

Place value counters or plain counters can be used on a place value grid to support this understanding. Children can also draw their own counters and group them through a more pictorial method.

# Year Five

$$22 \times 31 = 682$$

|    |     |    |
|----|-----|----|
| x  | 20  | 2  |
| 30 | 600 | 60 |
| 1  | 20  | 2  |

|   | H | T | O |
|---|---|---|---|
|   |   | 2 | 2 |
| x |   | 3 | 1 |
|   |   | 2 | 2 |
|   | 6 | 6 | 0 |
|   | 6 | 8 | 2 |

When multiplying a multi-digit number by 2-digits, use the area model to help children understand the size of the numbers they are using. This links to finding the area of a rectangle by finding the space covered by the Base 10. The grid method matches the area model as an initial written method before moving on to the formal written multiplication method.

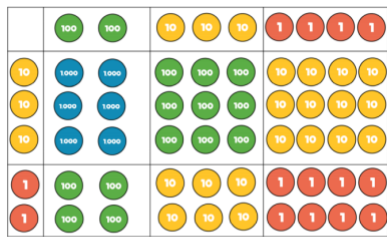

$$8,532 \div 2 = 4,266$$

|   |   |   |   |   |
|---|---|---|---|---|
|   | 4 | 2 | 6 | 6 |
| 2 | 8 | 5 | 1 | 3 |
|   |   |   | 1 | 2 |

Place value counters or plain counters can be used on a place value grid to support children to divide 4-digits by 1-digit. Children can also draw their own counters and group them through a more pictorial method.

Children should be encouraged to move away from the concrete and pictorial when dividing numbers with multiple exchanges.

# Year Five

|   | Th | H | T | O |
|---|----|---|---|---|
|   |    | 2 | 3 | 4 |
| x |    |   | 3 | 2 |
|   |    | 4 | 6 | 8 |
| 1 | 7  | 1 | 0 | 2 |
| 7 | 4  | 8 | 8 |   |

Children can continue to use the area model when multiplying 3-digits by 2-digits. Place value counters become more efficient to use but Base 10 can be used to highlight the size of numbers.

Encourage children to move towards the formal written method, seeing the links with the grid method.

|    |       |     |     |
|----|-------|-----|-----|
| x  | 200   | 30  | 4   |
| 30 | 6,000 | 900 | 120 |
| 2  | 400   | 60  | 8   |

$$234 \times 32 = 7,488$$

# Year Five/Year Six

| TTh | Th | H | T | O |
|-----|----|---|---|---|
|     | 2  | 7 | 3 | 9 |
| x   |    |   | 2 | 8 |
|     | 2  | 1 | 9 | 1 |
| 2   | 5  | 3 | 7 | 2 |
| 1   | 5  | 4 | 7 | 8 |
|     | 7  | 6 | 6 | 9 |
|     |    |   |   | 2 |

When multiplying 4-digits by 2-digits, children should be confident in the written method.

If they are still struggling with times tables, provide multiplication grids to support when they are focusing on the use of the method.

Consider where exchanged digits are placed and make sure this is consistent.

$$2,739 \times 28 = 76,692$$

# Year Six

|    |   |   |   |   |
|----|---|---|---|---|
|    |   | 0 | 3 | 6 |
| 12 | 4 | 4 | 3 | 7 |
|    |   |   |   | 2 |

$$432 \div 12 = 36$$

$$7,335 \div 15 = 489$$

|    |   |   |   |    |
|----|---|---|---|----|
|    | 0 | 4 | 8 | 9  |
| 15 | 7 | 7 | 3 | 13 |
|    |   |   |   | 13 |
|    |   |   |   | 5  |

|    |    |    |    |    |    |     |     |     |     |
|----|----|----|----|----|----|-----|-----|-----|-----|
| 15 | 30 | 45 | 60 | 75 | 90 | 105 | 120 | 135 | 150 |
|----|----|----|----|----|----|-----|-----|-----|-----|

When children begin to divide up to 4-digits by 2-digits, written methods become the most accurate as concrete and pictorial representations become less effective. Children can write out multiples to support their calculations with larger remainders. Children will also solve problems with remainders where the quotient can be rounded as appropriate.

$$372 \div 15 = 24 \text{ r}12$$

|   |   | 2 | 4 | r | 1 | 2 |
|---|---|---|---|---|---|---|
| 1 | 5 | 3 | 7 | 2 |   |   |
| - | 3 | 0 | 0 |   |   |   |
|   |   | 7 | 2 |   |   |   |
| - |   | 6 | 0 |   |   |   |
|   |   | 1 | 2 |   |   |   |

- 1 x 15 = 15
- 2 x 15 = 30
- 3 x 15 = 45
- 4 x 15 = 60
- 5 x 15 = 75
- 10 x 15 = 150

When a remainder is left at the end of a calculation, children can either leave it as a remainder or convert it to a fraction. This will depend on the context of the question.

Children can also answer questions where the quotient needs to be rounded according to the context.

$$372 \div 15 = 24 \frac{4}{5}$$

|   |   |   |   |               |
|---|---|---|---|---------------|
|   |   | 2 | 4 | $\frac{4}{5}$ |
| 1 | 5 | 3 | 7 | 2             |
| - |   | 3 | 0 | 0             |
|   |   |   | 7 | 2             |
| - |   |   | 6 | 0             |
|   |   |   | 1 | 2             |
